Art Unit: 3729

Claims 1-8 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The independent Claim calls for filling a (the) via hole with a predetermined amount of conductive paste and pressurizing the hole with reduced pressure to form a PCB with circuitry on one or both sides thereof. The specification does not indicate how this is accomplished inasmuch as what reduced pressure is used how the circuitry is preserved while the paste is being loaded into the via holes, how a predetermined amount of paste is placed into the via holes, the reduced pressures which used, the compositions of the pastes used and many other important variables which allow the person of ordinary skill in this art to make or use this invention. Applicants merely disclose in generalities. Applicants provide no specific examples of the parameters hereinabove mentioned. They have skirted what is their claimed invention.. Applicants particularly do not adequately explain how the metallic past is pressurized under reduced pressure. What in terms of numbers or conditions is used to carry out Applicants' claimed invention.
